Experience

IAMOPS PVT. LTD,

July 2025 - Present

DevOps Lead Engineer

Pune, Maharashtra

- Collaborating with **CTOs** and **VP RnDs** to improve System Architecture and achieve best product efficiency
- Achieving **SOC2** and **PCIDSS** Compliance with a Security Hub Score of **88%**.
- Consolidated codebases into unified repositories, and designed integrated CI/CD with GitHub actions reducing complexity and accelerating releases by **70%**.
- Optimized scheduling and scaling of Nodes in EKS clusters by right-sizing Karpenter node pools, saving **\$2K monthly** in production costs.
- Managing team members to attain **100%** responsibility over project deliveries.
- Established **GitOps (ArgoCD + Helm)** for Kubernetes; standardized declarative deployments, progressive delivery, and drift detection across services.
- Designed and implemented **laC** using **Pulumi and Terraform** for multi-tenant infrastructure including networking, databases, compute (**EC2/ECS/EKS**), Kubernetes resources, and storage (**S3/EFS**).

IAMOPS PVT LTD

July 2024 - June 2025

DevOps Engineer L2

Pune, Maharashtra

- Led **live migration** in GCP from **Webservers to Serverless architecture** using **Cloud Run** and **Pub/Sub**, supporting **1M users** at product launch.
- Implemented **KEDA-based request autoscaling** for **real-time** applications, maintaining **below 1s latency**.
- Engineered **CI/CD pipeline** with **BODA (Build Once Deploy Anywhere)** methodology and automated DB migrations via **GitHub Actions**, accelerating releases by **66%**.
- Deployed Automation for **regular security assessments** and reports using **Scout Suite** and **Prowler**, achieving **ISO** and **SOC2** compliance with **90%** Security Hub Score.
- Deployed distributed, scalable self-hosted observability stack **Prometheus, Loki, Mimir, Tempo, Grafana** achieving **100%** observability.

IAMOPS PVT LTD

December 2022 - June 2024

DevOps Engineer L1

Surat, Gujarat

- Managed DevOps operations like automating releases with **Jenkins**, application observability with Logs, Metrics and traces using **Loki, Prometheus, Tempo and Grafana** and setting up light-weight application environments for **release/load testing** for multiple applications across **AWS and GCP Cloud**.
- Delivered Kubernetes based architectures for **Microservices** on both AWS EKS and GKE by containerizing application and creating robust Helm charts and automated deployments with Argo Applications.
- Delivered **Load testing Environment** for PHP applications in **GKE** with **peering to MongoDB**.
- Conducted **Git** operations workshop for company associates.
- Executed **zero-downtime live migration** to Configured **Production-grade MongoDB Sharded Cluster**.
- Deployed PHP applications on on-prem servers and migrated load to new infrastructure.

Projects

AI based Intelligent Troubleshooter | Slack, N8N, EKS, Claude, Grafana MCP, GitHub, Linear

- Developed **AI Integrated Slack bot** capable to **investigate and troubleshoot** application issues and **remediate solutions 50%** faster.
- Deployed **Centralised Observability Stack** for **Grafana-MCP** to observe **Logs, Metrics, Traces, Database and Front-end Observability** with **Grafana, Loki, Mimir, Prometheus, Tempo, Faro and MongoDB**.

Cost-Optimized EKS Infrastructure with Advanced Autoscaling | EKS, Karpenter, KEDA, Spot Instances

- Reduced compute costs by up to **65%** using **Karpenter for intelligent autoscaling** with AWS Spot Instances, optimizing node configurations while ensuring **99.9%** uptime through resilient fallback strategies.

- Implemented **event-driven scaling with KEDA** to dynamically **allocate resources based on real-time traffic patterns**, improving efficiency and performance **without over-provisioning**.

IAC for Grafana Alerts and Dashboards | EKS, Grafana, Grafana Operator, ArgoCD, ArgoApp, Git and Pulumi.

- Implemented Grafana Operator with **Pulumi** and **GitOps** for dashboards and alerts, accelerating resource management across environments by **60%**.

CDC for RDS Databases for seamless DBAudit | RDS, Parameter Groups, DMS, S3, IAM, Pulumi

- Designed solution to **Capture Database Changes** leveraging parameter groups with **DMS** to track and record data changes in S3 and monitored failure with **Grafana** and Cloudwatch log groups.

MongoDB Datasource for Grafana | EKS, Docker, NodeJs, Grafana, API Gateway, Lambda, ArgoCD

- Built and Deployed a custom **Open-source MongoDB Plugin** to use as a Data source in Grafana to **query MongoDB databases** in secure practice with **AWS Lambda and EKS using Helm**.
- Built **custom dashboards** with Datasource that helped Dev team **track application events** and enhance productivity.

Achieved SOC2 with AWS Cloud Security | *AWS GuardDuty, Security Hub, AWS Inspector, ScoutSuite, Prowler, Snyk*

- Enhanced AWS security posture by implementing GuardDuty and Security Hub for threat detection and conducting vulnerability assessments with AWS Inspector, ScoutSuite, and Prowler and achieving **88% Security Hub Score**.
- Integrated Snyk to scan pre-deployment vulnerabilities, ensuring compliance with industry best practices.

Database Modernisation and Migration to Graviton | *AWS EC2, AMI, AWS Graviton, MongoDB, Snapshots, EBS, Alloy, Monit*

- Led a **live migration for Self-hosted MongoDB** servers from Bitnami to **AWS Graviton servers** optimizing resource utilisation by **30%**.
- Ensured server Up-time with **Monit and Grafana Alloy** and automated configuration Management with **AMI**.

Integrated CD for MonoRepo | Nx, GitHub Actions, GitHubARC Runners, Blacksmith Runners, ArgoCD

- Designed and Delivered consolidated CI/CD pipeline with **intelligent change detection**, building and promoting only modified applications with automated **E2E testing, hotfix handling, and promotions—accelerating releases by 90%**.

One-Click Automation | Pulumi, GitHub Actions, Vite Apps, Kubernetes

- Delivered PR-based lightweight ephemeral environments for Full Stack Apps in Kubernetes improving feature testing and avoiding unwanted disruptions.

Live Application Migration from ECS to EKS | Kubernetes, Traefik, CloudFront, ALB controller, Global Accelerator

- Migrated application with **1M+ active users** from **ECS to EKS**, leveraging Kubernetes-native scaling and deployment strategies resulting high availability and reduced downtime by **30%**.
- Reduced **99% status code 499** traffic on Application API by **migrating to Traefik proxy post rigorous testing and PoC**.

Technical Skills

Languages: Python, NodeJS, TS, Bash

Cloud Platforms: Amazon Web Services (AWS), Google Cloud Platform (GCP)

Containerization and Orchestration: Docker, Docker-Compose, ECS, Kubernetes, Google Kubernetes Engine (GKE), Amazon EKS

CI/CD and Automations: Jenkins, GitHub Actions, Gitlab CD, Bitbucket Pipelines, ArgoCD, NX, Amplify, N8N

Infrastructure as Code: Terraform, Pulumi, Ansible

Monitoring and Observability: Prometheus, Grafana, Loki, Mimir, Faro, OpenTelemetry, Uptime Kuma, ZenDuty

Education

Amity University Online, UP

MBA in Data Science - CGPA - 8.18

Uka Tarsadia University

B.Tech in Computer Engineering - CGPA - 8.68

Jan 2025 – Dec 2027

UP, India

Jun 2019 – May 2023

Bardoli, Gujarat

Certifications

- **GCP Associate Cloud Engineer**
- **AWS Certified Solutions Architect associate**
